

The IC100 controller system ensures that the Indigo-Clean fixtures provide the lighting required for normal room operations while also **continuously** killing harmful bacteria, 24/7.

- ☑ Automatically chooses white disinfection mode or Indigo Disinfection Mode
- ☑ Incorporates dual-technology sensor system (Passive Infrared and Ultrasonic) to ensure proper lighting conditions
- ☑ Guarantees maximum disinfection

- Indigo-Clean Fixtures
- Ultrasonic Sensor
- Passive Infrared Sensor
- External 0-10V Dimmer
- White Disinfection Mode Override Switch (DC) <OPTIONAL>

For more information, go to www.indigo-clean.com

During periods of occupancy, this IC100 control system is designed to set the Indigo-Clean fixtures into White Disinfection Mode, which provides comfortable white light, yet maintains a level of **continuous** disinfection to harmful bacteria. After the room has been

unoccupied for a time, the control system will set the Indigo-Clean luminaires to Indigo Disinfection Mode, which provides maximum disinfection to harmful bacteria.

White Disinfection Mode

White disinfection mode provides ambient lighting and continuous environmental disinfection while room is occupied

Indigo Disinfection Mode

Indigo disinfection mode can be selected to provide maximum continuous disinfection when room is not in use
